Leon Ekelund

Frontend developer

⊙ Stockholm | ☎ +46709752924 | @ leongudmundssonekelund@gmail.com

Summary

Based in Stockholm, I'm a front-end developer focused on building intuitive and visually engaging web experiences.

With a strong creative background spanning music production and 3D modeling, I'm driven by turning ideas into tangible results. That creative foundation influences how I approach development, design, and problem-solving.

Experience

Assemblin Charge   November 2024 - Now
Technical Operations Support   Stockholm

Second-line support for one of Sweden's largest electrical installation companies, specializing in EV charging software. Responsible for configuring and managing charger settings, as well as integrating new chargers via OCPP, ensuring payments run smoothly and systems operate as intended.

Chargepanel   February 2022 - November 2024
B2B Technical Support   Stockholm

Provided phone, email, and helpdesk support to business customers. Acted as a presenter for prospective clients, demonstrating the SaaS solution and managing customer onboarding. Collaborated closely with the development team by creating and managing Jira tickets, contributing UI/UX input in Figma, and supporting content tasks such as image editing. Contributed to the development of the helpdesk structure, support workflows, flowcharts, and internal logging processes.

Apple   July 2020 - February 2022
Chat Support

Level 1 helpdesk and chat support for Apple, providing customer assistance across iOS, iPadOS, macOS, and watchOS. Delivered troubleshooting and guidance following official Apple training in Apple platforms and networking, and supported customers with App Store–related matters, including reimbursements and account issues.

Victory Records   2016-2020
Recording Artist   Chicago

Performed as a vocalist in a band signed to a major independent record label in the United States. Gained practical experience in the music business while touring extensively across the U.S., Europe, and the UK, and collaborating with a wide range of industry professionals.

Education

Technigo   2025-2026
Frontend development

A web development program focused on modern JavaScript (ES6+), TypeScript, React, HTML5, CSS, and server-side development with Node.js. Ongoing project work ranges from core programming fundamentals to the creation of fully structured, production-style web applications built with current industry standards and best practices.

The workflow follows Agile methodology with structured sprint planning, regular check-ins, demos, and reflective sessions to support continuous improvement. Collaboration is a central component, with pair-programming and mob-programming used extensively to strengthen problem-solving, communication, and real-world development workflows.
